### PRIORITY SCHEDULING

Aim:

To implement priority scheduling technique

Algorithm:

1. Get the number of processes from the user.
2. Read the process name, burst time and priority of process.
3. Sort based on burst time of all processes in ascending order based priority 4.
- Calculate the total waiting time and total turnaround time for each process 5.
- Display the process name & burst time for each process.
6. Display the total waiting time, average waiting time, turnaround time

Program Code:

```
#include <stdio.h>
int main() {
    int n;
    printf("Enter no of process\n");
    scanf("%d", &n);
    int p[n], bt[n], wt[n], tat[n], pr[n], t1, t2, t3;
    float sum1=0, sum2=0;
    printf("Enter process no, BT & priority\n");
    for (int i=0; i<n; i++) {
        scanf("%d %d %d", &p[i], &bt[i], &pr[i]);
    }
    for (int i=0; i<n-1; i++) {
        for (int j=0; j<n-1-i; j++) {
            if (pr[j] > pr[j+1]) {
                t1 = pr[j];
                pr[j] = pr[j+1];
                pr[j+1] = t1;
            }
        }
    }
}
```

```

t2 = p[j];
p[j] = p[j+1];
p[j+1] = t2;
t3 = bt[j];
bt[j] = bt[j+1];
bt[j+1] = t3;

```

```

    }
}

wt[0] = 0;
for (int i = 1; i < n; i++) {
    wt[i] = wt[i-1] + bt[i-1];
    s1 += wt[i];
}

for (int i = 0; i < n; i++) {
    tat[i] = wt[i] + bt[i];
    s2 += tat[i];
}

for (int i = 0; i < n; i++) {
    printf("%d\t %d\t %d\t %d\t %d\n",
           p[i], bt[i], pr[i], wt[i], tat[i]);
}

printf("\n Avg waiting time = %.2f", s1/n);
printf("\n Avg TAT = %.2f", s2/n);

```

3

OUTPUT:

Enter No of process

4

Enter process no, BT, priority

1	8	2
2	4	1
3	6	4
4	3	3

Process	Bursttime	Priority	WT	TAT
P <sub>2</sub>	4	1	0	
P <sub>1</sub>	8	2	4	
P <sub>4</sub>	3	3	12	
P <sub>3</sub>	6	4	21	

Avg waiting Time = 7.75 ms

Avg TAT = 13.00 ms.

Sample Output:

```
C:\Users\admin\Desktop\Untitled1.exe
Enter Total Number of Process:4
Enter Burst Time and Priority
P[1]
Burst Time:6
Priority:3
P[2]
Burst Time:2
Priority:2
P[3]
Burst Time:14
Priority:1
P[4]
Burst Time:6
Priority:4

Process      Burst Time      Waiting Time      Turnaround Time
P[3]          14              0                14
P[2]          2              14              16
P[1]          6              16              22
P[4]          6              22              28

Average Waiting Time=13
Average Turnaround Time=28
```

Result:

Thus the priority Algorithm is executed.
